the real challenge of programming isn't learning a language's syntax it's learning to creatively solve problems so you can build something great in this one of a kind text author v anton spraul breaks down the ways that programmers solve problems and teaches you what other introductory books often ignore how to think like a programmer each chapter tackles a single programming concept like classes pointers and recursion and open ended exercises throughout challenge you to apply your knowledge you'll also learn how to split problems into discrete components to make them easier to solve make the most of code reuse with functions classes and libraries pick the perfect data structure for a particular job master more advanced programming tools like recursion and dynamic memory organize your thoughts and develop strategies to tackle particular types of problems although the book's examples are written in c the creative problem solving concepts they illustrate go beyond any particular language in fact they often reach outside the realm of computer science as the most skillful programmers know writing great code is a creative art and the first step in creating your masterpiece is learning to think like a programmer

this book grew out of a lot of angst well and wine put enough angst in me and i'll start ranting pour in some wine and the rants get mean and funny i still go back and read these posts now and then and i always laugh i was so mean my angst grew out of traveling different roads than most programmers those roads forced me to see the world differently now i see all sorts of patterns that many experienced programmers fail to see because well to put it bluntly they're stuck in ruts over the past 25 years i've done a bunch of dramatically different types of programming and i've also written far more code than any programmer ever should the long roads i've traveled have basically given me a sixth sense i see dead people and it sucks if you're ever unlucky enough to acquire a dreadful sixth sense there are really only two choices you can be angry and depressed about it or you can laugh about it so i try to laugh it's hard but i'm getting better at it the wine helps practice helps too you need to get in the habit of laughing at yourself at others at the crazy world we live in or in time you'll just stop laughing altogether when i first started ranting i was the ugly american stomping around in my posts and essentially yelling what the hell is wrong with all you people but over the next ten years or so i like to think i've grown into more of an amateur software anthropologist i now take cultural relativism

seriously and i try hard not to judge people who think differently from me of course i don t mind poking fun at them because i don t mind people poking fun at me and ultimately i would like to convince undecided programmers to share my view of the programming world because programming works best if everyone nearby does it the same way so i ll continue to argue that my view which i ve recently taken to calling software liberalism is a perfectly valid and perhaps even preferable way to do a lot of software development converting everyone to be more liberal is doomed to fail of course but even so i hope i can still help people in radically different software cultures to understand each other better i m going to keep ranting because it appears to be the only way to make a message sink in to a very large audience some people still tell me that my blog posts are too long they tell me i could have made my point in under a hundred words i have noticed that this complaint comes most often from people who disagree with me they re really just saying they want less work to voice their disagreement but even some folks who agree with me find the posts too long to carry their attention and they complain too they re missing the point though the posts aren t too long you need a certain minimum heft to penetrate through years of trial and error i ve found that the best way to get a lot of people to listen to you is to tell them a story and you can t spin a good yarn without settling in and enjoying the ride so that s what this book is it s really a bunch of stories each might take the form of an article essay guide rant or occasionally a fiction tale but behind the structure each one of them is sharing a story even if you don t always agree i m hoping you ll at least find the stories entertaining and with luck sometimes even eye opening the guys at hyperink chose which of my posts to include by and large and they also came up with the overall chapter organization i made a couple of tweaks but what you re looking at is largely their vision of how to curate this stuff into a cohesive book i think they did an admirable job i hope you enjoy the journey as much as i did steve yegge august 2012
